

Berry Metal Commissions Chemical Energy in Italy

Berry Metal has successfully installed and commissioned our forged and fabricated DuraForge™ Box and V-Max™ Burner at an Italian Steel Producer.

Installed at one of the steelmaker's two 95-ton AC EAF Furnaces, Berry utilized the existing furnace sidewall, so that no panel changes were required by the Brescia-based steelmaker.

Berry's system increases chemical energy flexibility, reduces electrode consumption, decreases kWh/ton, reduces burner plugging and repair costs, and increases refractory life.
